POPULATION	
Oregon Resident Population by County, 1975-1981	1
LABOR FORCE STATISTICS	
Oregon Civilian Labor Force by County, 1975-1981	2
Oregon Total Employment by County, 1975-1981	3
Oregon Unemployment by County, 1975-1981	4
Oregon Unemployment Rates by County, 1975-1981	5
Oregon Unemployment Rates by County as a Percentage of the State Average, 1975-1981	6
INCOME STATISTICS	
Oregon Total Personal Income by County and Place of Residence, 1975-1980	7
Oregon Per Capita Income by County and Place of Residence, 1975-1980	8
Oregon Total Laborers' and Proprietors' Income by County and Place of Work, 1975-1980	9
Oregon Farm Income by County and Place of Work, 1975-1980	10
Oregon Manufacturing Income by County and Place of Work, 1975-1980	11
Oregon Non-Manufacturing Income by County and Place of Work, 1975-1980	12
Oregon Government Income, by County and Place of Work 1975-1980	13
Oregon Median Family Income Estimates, by County, 1969-1981	14
OTHER COUNTY STATISTICS	
Oregon Commercial Bank Deposits by County, 1975-1981	15
Oregon Retail Sales by County, 1975-1980	16
Oregon Assessed Taxable Valuation by County, 1975-1981	17
Oregon Single Family Housing Starts, 1975, '78, '80 & '81	18-19
Map of Oregon	20

PREFACE

The Oregon County Economic Indicators is a compilation of the most commonly requested data for Oregon's counties. It is collected and published annually by the Research and Information Services Division of the Economic Development Department. The data are used in making comparative analyses among counties, for marketing studies, industrial expansion and relocation decisions, development plans, and labor market profiles.

There are several aspects of the following data that deserve an explanation.

Growth Rates are comparable to average annual compound interest rates. Given the data in a beginning and ending year, a compound annual interest rate is computed. This is referred to as a growth rate, and is read as a percent of growth per annum. For example, Oregon had a population growth rate of 2.5 percent per year between 1975 and 1981.

Labor Force Statistics are available only on a labor market basis. Labor Market Areas are county or multi-county areas within which the majority of the residents also work. In Oregon there are three multi-county labor force areas. They are: the Portland Standard Metropolitan Statistical Area, (SMSA), which includes Clackamas, Multnomah and Washington Counties in Oregon, and Clark County in Washington; the Salem SMSA, which includes Marion and Polk Counties; and the Wasco-Sherman labor market area which consists of those two counties.

BEA Income Series: The U.S. Bureau of Economic Analysis (BEA) makes annual estimates of county income by major source. In this publication only the primary aggregates, such as per capita income, have been published. The personal and per capita income, presented here, are adjusted for place of residence. The figures for total laborers' and proprietors' income received from farm, manufacturing, non-manufacturing and government sources are by place of work.

Oregon Retail Sales: The Census of Retail Trade is taken once every five years by the U.S. Department of Commerce, Bureau of Census. The data published here for 1977 are Census data. The Sales and Marketing Management Magazine (S&MM) publishes county estimates for the years in which the Census is not taken. However, S&MM's 1978 estimates were made before the 1977 Census estimates were available. For this reason, the S&MM estimates were too low for 1978. Rather than publishing these figures, the Information and Research Division made estimates for 1978 from the 1972 and 1977 Census of Retail Trade data.

If you have any questions or comments about this publication, please contact Laila Cully, Research and Information Services Manager, at (503) 373-1200.

Map of Oregon	22

PREFACE

The Oregon County Economic Indicators is a compilation of the most commonly requested data for Oregon's counties. It is collected and published annually by the Information and Research Division of the Economic Development Department. The data are used in making comparative analyses among counties, for marketing studies, industrial expansion and relocation decisions, development plans, and labor market profiles.

There are several aspects of the following data that deserve an explanation.

Growth Rates are comparable to average annual compound interest rates. Given the data in a beginning and ending year, a compound annual interest rate is computed. This is referred to as a growth rate, and is read as a percent of growth per annum. For example, Oregon had a population growth rate of 1.9 percent per year between 1975 and 1982.

Labor Force Statistics are available only on a labor market basis. Labor Market Areas are county or multi-county areas within which the majority of the residents also work. In Oregon there are three multi-county labor force areas. They are: the Portland Metropolitan Statistical Area, (MSA), which includes Clackamas, Multnomah and Washington Counties in Oregon, and Clark County in Washington; the Salem MSA, which includes Marion and Polk Counties; and the Wasco-Sherman labor market area which consists of those two counties. While Portland MSA data do include Clark County, the Oregon totals do not.

BEA Income Series: The U.S. Bureau of Economic Analysis (BEA) makes annual estimates of county income by major source. In this publication only the primary aggregates, such as per capita income, have been published. The personal and per capita income, presented here, are adjusted for place of residence. The figures for total labor and proprietors' income received from farm, manufacturing, non-manufacturing and government sources are by place of work. The table of average earnings per job is a new series, and includes all non-farm wage and salary employment, including full and part-time, by place of work.

Oregon Retail Sales: The Census of Retail Trade is taken once every five years by the U.S. Department of Commerce, Bureau of Census. The data published here for 1977 are Census data. The Sales and Marketing Management Magazine (S&MM) publishes county estimates for the years in which the Census is not taken. However, S&MM's 1978 estimates were made before the 1977 Census estimates were available. For this reason, the S&MM estimates were too low for 1978. Rather than publishing these figures, the Information and Research Division made estimates for 1978 from the 1972 and 1977 Census of Retail Trade data.

If you have any questions or comments about this publication, please contact Laila Cully, Information and Research Division Manager, at (503) 373-1200.

1/ The 1982 county income series will be released in April 1984.

* The revised estimates in this area are sufficiently different from the estimates for earlier years that a discontinuity in the time series between 1976 and 1977 exists for total and per capita personal income.

Source: U.S. Department of Commerce, Bureau of Economic Analysis. Computations by the Information and Research Division, Oregon Economic Development Department. Ranking is from greatest to least.

1/ The 1982 county income series will be released in April 1984.

* The revised estimates in this area are sufficiently different from the estimates for earlier years that a discontinuity exists in the time series between 1976 and 1977.

1/ The 1982 county income series will be released in April 1984.

* The revised estimates in this area are sufficiently different from the estimates for earlier years that a discontinuity exists in the time series between 1976 and 1977.
